CCES Cumulative Common Content (2006 - 2018)

Shiro Kuriwaki*

Guide last updated: 2019-04-29

Please cite dataset as

Kuriwaki, Shiro, 2018, "Cumulative CCES Common Content (2006-2017)", doi:10.7910/DVN/II2DB6, Harvard Dataverse

This dataset combines thirteen years (2006 - 2018) of the Cooperative Congressional Election Study (Principal Investigators: Stephen Ansolabehere, Sam Luks, Brian Schaffner).

The Cooperative Congressional Election Study (CCES) is an online survey conducted around November of each year, asking a range of questions on political behavior and public opinion. Questions can change from year to year; this cumulative file includes standard questions asked multiple years.

This dataset was constructed from CCES datasets from each year. The final product is a tibble-style data frame (built in R) that is available as a Stata dta file. In addition, the same dataset is available on Crunch, an analytics interface optimized for survey datasets.

Please note that this cumulative dataset makes some modifications to the original CCES datasets for comparability. across years These modifications are only made when differences are deemed sufficiently minor, and are documented in source code (see below). However, for details on the survey methodology and a list of all questions, readers should consult the guides for each year.

- To see the source code, report a bug, or ask a question about the data, please feel free to file an issue from the source code page: https://github.com/kuriwaki/cces_cumulative. Alternatively, please contact me by email.
- To obtain the individual year's CCES datasets, search the CCES dataverse (https://dataverse.harvard.edu/dataverse/cces) or access the CCES homepage (https://cces.gov.harvard.edu/). Sign-up to the Crunch dataset from the homepage as well.
- To examine the survey methodology, consult the Methodology section of the most recent Common Content's codebook: https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/GDF6Z0.

^{*}Department of Government, Harvard University. Email: kuriwaki@g.harvard.edu. Bug reports welcome. My thanks to Alexander Agadjanian, Steve Ansolabehere, Stephen DiMauro, Bernard Fraga, Nathan Kaplan, Mayya Komisarchik, and Stephen Pettigrew for their contributions. Thanks to Joe Williams, Jon Keane and Gordon Shotwell of YouGov and Crunch for their help.

Getting Started

The .Rds format can be read into R. This format preserves dataset properties such as the distinction between integers and doubles, and labelled variables. Unlike a .Rdata file, an .Rds file is assigned to an object.

```
df <- readRDS("cumulative_2006_2018.Rds")</pre>
```

The dataset in R is best viewed in dplyr, although it can be analyzed as a standard data frame.

```
library(tidyverse)
df
```

```

```

A Stata dta file is provided as well. cumulative_2006_2018.dta can be read by Stata, or in R by the haven package

```
library(haven)
df <- read_dta("cumulative_2006_2018.dta")</pre>
```

A note on variable types. The R dataset stores variables in numeric, character, factor, or labelled (technically labelled_haven) format. The first three classes are commonly used, but the lablelled format is more novel. labelled classes are numeric integers where each integer is associated with a label. This makes it the same as factor but always ordered and referenceable by its numeric value. It is essentially the same idea as labels in Stata and SPSS. It is built around R's haven package, which includes more documentation.

A labelled variable's labels are not shown immediately in the Console:

```
select(df, year, case_id, pid3)
```

```
# A tibble: 452,755 x 3
   year case_id pid3
  <int>
          <int> <int+lbl>
 1 2006 439219 1
 2 2006 439224 4
   2006 439228 1
 3
 4
   2006 439237 1
 5
   2006 439238 1
 6
   2006 439242 3
 7
   2006
         439251 2

Features of the 2006 - 2018 Cumulative Dataset

Unified Variable Names

Most variables in this dataset come straight from each year's CCES. However, it renames and standardizes variable names, making them accessible in one place. Please see the rest of this guide or the Crunch dataset for a full list and description of variables.

Chosen Candidate Names and Identifiers

One addition to this cumulative dataset are variables of candidate names and identifiers that a respondent chose. In the individual year's CCES datasets, typically the response values for a vote choice question is a generic label, e.g. Candidate1 and Candidate2. Then, separate variables of names and parties correspond to each Candidate1 and Candidate2.

Instead, the cumulative dataset shows both the generic label *and* the chosen candidate's name, party, and identifier, which will vary across individuals.

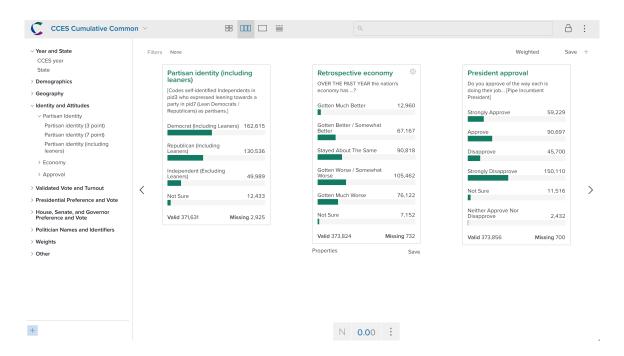

```
select(df, year, case_id, st, matches("voted_sen"))
```

```

Crunch

A version of the dataset is also included in Crunch, a database platform that makes it easy to view and analyze survey data either with our without any programming experience. Crunch is in beta at the time of writing.

 Obtain Access: For View access to the dataset (free), please sign up here: https:// harvard.azl.qualtrics.com/jfe/form/SV_066hQi4Eeco3Kap. For questions and more access, please contact the CCES Team. 2. Browse: Crunch offers a web GUI for quickly browsing variables:

3. Analyze: The crunch interface allows Viewers to make cross-tabs and bar graphs quickly.

Crunch datasets can also be manipulated from a R package, crunch https://github.com/Crunch-io/rcrunch.

Variables

The sections below provide summary more information on each variable.

- The title shows the name as used in the dataset, suitable for coding ("alias" in Crunch terminology). followed by a more descriptive name suitable for presentation ("name" in Crunch terminology).
- Question wordings, where applicable, immediately follow. Otherwise a description is provided
 in square brackets ([]). All square brackets, both in the description and the response
 options, indicate descriptions that are summaries of what the respondent saw rather than the
 question verbatim.
- A tabulation of response options (or summary statistics for numeric variables) follow. Numbers are unweighted counts.
- The "Years" bullet lists the years of the CCES in which data on the variable is available at all.
 If a year is not listed, either the question was not asked in the year or was not incorporated in the creation of this dataset.
- Finally, the "Limitations" bullet notes some of the caveats required when interpreting this
 variable. As this dataset is combinations of different surveys, some year-specific details on
 implementation are inevitably lost. For example, for all 2016 responses "Not Asked" and
 "Skipped" are both coded as a NA (missing) to stay consistent with past years that did not
 make that finer distinction.

Administration

year: CCES year

[Year of CCES Common Content]

```
year n
2006 36421
2007 9999
2008 32800
2009 13800
2010 55400
2011 20150
2012 54535
2013 16400
2014 56200
2015 14250
2016 64600
2017 18200
2018 60000
```

starttime: Start time

[Pre-election wave start time (up to second)]

Years: All of 2006-2018

tookpost: Took post-election wave

[Whether or not the respondent took the post-election wave of the survey (in even years)]

```
tookpost n
Did Not Take Post-Election Survey 59064
Took Post-Election Survey 300892
(Missing) 92799
```

 Years: 2006, 2008, 2010, 2012, 2014, 2016, 2018 (Post-election wave only exists for even years)

Weights

weight: Survey weight (Year-Specific)

[weights from pre-election survey of each year]

```
Min. 1st Qu. Median Mean 3rd Qu. Max. 0.0000 0.4259 0.7281 1.0000 1.1741 15.0006
```

- Years: All of 2006-2018
- In even years, they are re-computed after vote validation has been computed and those recomputed weights are taken here when available. The weights applied to the sample (which
 is originally drawn from a matched sample) are constructed to make each year's respondents'
 pool representative of the national adult population. See the methodology section of the 2016
 Guide for details.
- Limitations: Only specific to each year. Built off of the entire pre-election wave sample, but not necessarily to adjust post-election wave respondents. See weight_post

weight_cumulative: Survey weight (Cumulative)

[weight variable with simple adjustment: multiplied a constant within year to make years comparable]

```
Min. 1st Qu. Median Mean 3rd Qu. Max. 0.0000 0.2989 0.5562 0.9418 1.0754 24.0297
```

- Years: All of 2006-2018
- Limitations: Only a simple transformation of weight. Specifically, weight_cumulative is
 weight divided by the year-specific factors shown in the following table. For example, all
 weights in the 2016 common content are divided by about 1.97, because it has about twice
 as many observations as the other datasets.

Year	Observations	Factor
2006	36,421	1.11
2007	9,999	0.30
2008	32,800	1.00
2009	13,800	0.42
2010	55,400	1.69
2011	20,150	0.61
2012	54,535	1.66
2013	16,400	0.50
2014	56,200	1.71
2015	14,250	0.43
2016	64,600	1.97
2017	18,200	0.55
2018	60,000	1.83

weight_post: Survey weight for post-election wave

[weight for post-election wave respondents. Only available for some of the even years.]

```
Min. 1st Qu. Median Mean 3rd Qu. Max. NA's 0.00 0.45 0.70 1.00 1.10 15.00 303170
```

• Years: 2012, 2016, 2018

Limitations: Only available for some even years.

Geography

A series of variables for the respondent's location

- state: State (FIPS): [State (Imputed from input zipcode)]
- st: State abbreviation (FIPS): [State (Imputed from input zipcode)]
- dist: Congressional district number in current Congress: [Current Congressional District Number (Imputed from input zipcode)]
- dist_up: Congressional district number for upcoming Congress: [Upcoming Congressional District Number (Imputed from input zipcode)]
- cd: Congressional district in current Congress: [Current Congressional District (Imputed from input zipcode)]
- zipcode: Zipcode of residence: "So that we can ask you about the news and events in your area, in what zip code do you currently reside?"
- county_fips: County of residence: [County (Imputed from input zipcode)]

Years: All of 2006-2018

Limitations: Some years do not provide the variable relevant to dist_up, in which case
the current district (dist) is assigned automatically. Thus, dist_up may not reflect district changes in off-cycle redistricting. Only residence (not registration) geographies included
here; see individual years' for registration geographies.

Demographics

gender: Gender

"Are you male or female?"

gender n Male 210102 Female 242653

Years: All of 2006-2018

birthyr: Year of birth

"In what year were you born?"

Min. 1st Qu. Median Mean 3rd Qu. Max. 1900 1950 1961 1963 1977 2000

• Years: All of 2006-2018

age: Age

[Approximate age computed from the year of survey minus Year of Birth]

Min. 1st Qu. Median Mean 3rd Qu. Max. 18.00 36.00 51.00 49.61 62.00 109.00

• Years: All of 2006-2018

educ: Education

"What is the highest level of education you have completed?"

educ n No HS 13939 High School Graduate 125323 Some College 112290 2-Year 43606 4-Year 103011 Post-Grad 54519 (Missing) 67

Years: All of 2006-2018

race: Race

"What racial or ethnic group best describes you?"

```
race n
White 337793
Black 49162
Hispanic 35924
Asian 9134
Native American 3543
Mixed 8919
Other 7554
Middle Eastern 726
```

- Years: All of 2006-2018
- Limitations: The "Hispanic" value may undercount self-identified Hispanics. See hispanic

hispanic: Hispanic

"Are you of Spanish, Latino, or Hispanic origin or descent? [Asked if response to race is not Hispanic]"

```
hispanic n
Yes 11113
No 321994
(Missing) 119648
```

- Years: 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018
- In years in which this question was fielded, this question supplements the race variable by asking those who did *not* respond "Hipsanic" in the race question.

faminc: Family Income

"Thinking back over the last year, what was your family's annual income? [Brackets coarsened]"

```
faminc
   Less than 10k 18780
        10k - 20k 32995
        20k - 30k 46019
        30k - 40k 46728
        40k - 50k 41768
        50k - 60k 40863
        60k - 70k 30063
        70k - 80k 32459
       80k - 100k 37809
      100k - 120k 27566
      120k - 150k 22108
            150k+ 25075
Prefer not to say 48955
          Skipped
                     12
        (Missing) 1555
```

• Years: All of 2006-2018

- Limitations: The income brackets provided changed slightly over time. The brackets in this
 cumulative dataset coarsens certain brackets, losing some granularity. In particular, from
 2011-2016, respondents answering "over 150k" were asked a follow-up question to select
 one of several brackets above 150k. Here, these are top-coded and only labelled as "over
 150k."
- The 2009 CCES did not have an option for 60-70k.

marstat: Marital Status

"What is your marital status?"

marstat n
Married 250629
Separated 7606
Divorced 49651
Widowed 21287
Single 101416
Domestic Partnership 20611
(Missing) 1555

• Years: All of 2006-2018

Validations

Observations in even years include (or will include) indicators for validated voting, which means that YouGov has matched survey respondents' personal identifiable information to public voter files, which in turn officially record whether a person has voted or not. Validation is often completed in the summer following the election; 2018 validation data is not available as of March. For more information, see Ansolabehere and Hersh (2012).

vv_regstatus: Validated registration status

[Validation results. Missing if validation was not conducted in the year. Categories are aggregated. Both Matched-not registered and unmatched are labeled as a no record.]

```
vv_regstatus n
Active 178356
No Record Of Registration 61861
Unregistered 13826
Dropped 5294
Inactive 3047
Multiple Appearances 1151
(Missing) 189220
```

- Years: 2008, 2010, 2012, 2014, 2016
- Limitations: Collapses some response options

vv_party_gen: Validated registered party

[Validation results. Only available for some staets and years]

```
vv_party_gen
                                     n
No Record Of Party Registration 60890
                       Unknown 51379
              Democratic Party 27058
              Republican Party 21522
          No Party Affiliation
                                 9835
              Declined To State 1579
                         Other 1286

                                  376
                                  194
                   Green Party
            Constitution Party
                                   27
                  Reform Party
                                    9
                                    3
                Socialist Party
                            Cns
                                    1
                      (Missing) 277420
```

- Years: 2012, 2014, 2016
- Limitations: Not available for some even years

vv_party_prm: Validated registered Primary party

[Validation results. Only available for some staets and years]

vv_party_prm n
No Record Of Party Registration 157120
Republican Party 10010
Democratic Party 8202
Other 3
(Missing) 277420

• Years: 2012, 2014, 2016

• Limitations: Not available for some even years

Turnout

vv_turnout_gvm: Validated turnout General Election

[Validation results. All vote methods (polling, mail, early, unknown, etc..) are aggregated as a vote.]

```
vv_turnout_gvm n
Voted 169204
No Record Of Voting 129019
No Voter File 1733
(Missing) 152799
```

- Years: 2006, 2008, 2010, 2012, 2014, 2016
- Limitations: Collapses most response options. For example, the particular voting method
 is collapsed into one category, even though gvm stands for General Election voting method.
 Also, the result of not matching to a voter file is collapsed with the result of matching to a
 voter file and having no indication of turning out to vote. The distinction is unclear in earlier
 years, and is thus collapsed for all years here. For finer distinctions, see the individual year's
 CCES.

vv_turnout_pvm: Validated turnout Primary Election (Congressional)

[Validation results]

```
vv_turnout_pvm n
No Record Of Voting 185927
Voted 76245
No Voter File 1363
(Missing) 189220
```

Years: 2008, 2010, 2012, 2014, 2016Limitations: See vv_turnout_gvm

Identity and Attitudes

Partisan Identity

pid3: Partisan identity (3 point)

"Generally speaking, do you think of yourself as a ...?"

```
pid3 n
Democrat 160637
Republican 118907
Independent 126270
Other 17975
Not Sure 20012
(Missing) 8954
```

- Years: All of 2006-2018
- Limitations: Response options offer slightly by year. For example, the Not Sure option is not a response option in years 2006 and 2010. Open-text responses not included. 2010 values are from the post-election wave.

pid7: Partisan identity (7 point)

[Based on branching from Partisan Identity question]

```
pid7 n
Strong Democrat 107733
Not Very Strong Democrat 54838
Lean Democrat 45411
Independent 60946
Lean Republican 47739
Not Very Strong Republican 43810
Strong Republican 75782
Not Sure 13480
(Missing) 3016
```

Years: All of 2006-2018Limitations: See pid3

pid3_leaner: Partisan identity (including leaners)

[Codes self-identified Independents in pid3 who expressed leaning towards a party in pid7 (Lean Democrats / Republicans) as partisans.]

```
pid3_leaner n
Democrat (Including Leaners) 207982
Republican (Including Leaners) 167331
Independent (Excluding Leaners) 60946
Not Sure 13480
(Missing) 3016
```

Years: All of 2006-2018Limitations: See pid3

ideo5: Ideology (5 point)

"In general, how would you describe your own political viewpoint?"

```
ideo5 n
Very Liberal 40142
Liberal 79591
Moderate 141633
Conservative 105268
Very Conservative 52243
Not Sure 32104
(Missing) 1774
```

Years: All of 2006-2018

Economy

economy_retro: Retrospective economy

"OVER THE PAST YEAR the nation's economy has ...?"

```
economy_retro n
Gotten Much Better 29702
Gotten Better / Somewhat Better 100766
Stayed About The Same 118229
Gotten Worse / Somewhat Worse 114965
Gotten Much Worse 77949
Not Sure 10294
(Missing) 850
```

- Years: All of 2006-2018
- Limitations: Response options varies by year. Some are collapsed into one category (e.g. Gotten Better, presented in some years, and Gotten Somewhat Better, presented in other years, are collapsed into Gotten Better / Somewhat Better). Some are left as is. For example, Not Sure was not an option in 2009.

News Interest

newsint: News Interest

"Some people seem to follow what's going on in government and public affairs most of the time, whether there's an election going on or not. Others aren't that interested. Would you say you follow what's going on in government and public affairs .."

```
newsint n
Most Of The Time 225200
Some Of The Time 105337
Only Now And Then 50141
Hardly At All 24621
Don't Know 10449
(Missing) 37007
```

- Years: 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018
- Limitations: Not asked in 2006. Similar questions about watching TV news was asked in 2006, but not included in this cumulative file.

Approval

approval_pres: President approval

"Do you approve of the way each is doing their job. . . [Pipe Incumbent President]"

```
approval_pres n
Strongly Approve 92872
Somewhat Approve 104677
Somewhat Disapprove 47005
Strongly Disapprove 194516
Not Sure 12507
Neither Approve Nor Disapprove 443
(Missing) 735
```

- Years: All of 2006-2018
- Limitations: Neither approve nor disapprove only included in 2007.
- This question is asked in a grid format, along with Governors, Congress, and Courts.

approval_rep: House Representative approval

"Do you approve of the way each is doing their job... [Pipe Incumbent Representative's Name]"

```
approval_rep n
Strongly Approve 65102
Approve / Somewhat Approve 142503
Disapprove / Somewhat Disapprove 79595
Strongly Disapprove 70663
Never Heard / Not Sure 85772
Neither Approve Nor Disapprove 1798
(Missing) 7322
```

- Years: All of 2006-2018
- Limitations: Neither approve nor disapprove only included in 2007.
- This question is asked in a grid format, along with Senators (approval_sen1, approval_sen2).
- To see who [Representative] refers to for a particular respondent, see rep_inc (incumbent identifier in rep_icpsr)

approval_sen1: Senator 1 approval

"Do you approve of the way each is doing their job... [Pipe Incumbent Senator 1's Name]"

```
approval_sen1 n
Strongly Approve 58761
Approve / Somewhat Approve 144415
Disapprove / Somewhat Disapprove 90846
Strongly Disapprove 89017
Never Heard / Not Sure 63783
Neither Approve Nor Disapprove 1413
(Missing) 4520
```

• Years: All of 2006-2018

- Limitations: : Response options varies by year. Some are collapsed into one category (e.g. Approve, presented in some years, and Somewhat Approve, presented in other years, are collapsed into Approve / Somewhat Approve). Neither approve nor disapprove only included in 2007.
- To see who [Senator 1] refers to for a particular respondent, see sen1_inc (incumbent identifier in sen1_icpsr)

approval_sen2: Senator 2 approval

"Do you approve of the way each is doing their job... [Pipe Incumbent Senator 2's Name]"

```
approval_sen2 n
Strongly Approve 63135
Approve / Somewhat Approve 139337
Disapprove / Somewhat Disapprove 88539
Strongly Disapprove 89232
Never Heard / Not Sure 66076
Neither Approve Nor Disapprove 1158
(Missing) 5278
```

See approval_sen2

approval_gov: Governor approval

"Do you approve of the way each is doing their job. . . Governor of [Pipe State]"

```
approval_gov n
Strongly Approve 67404
Somewhat Approve 139940
Somewhat Disapprove 84271
Strongly Disapprove 117282
Not Sure 40318
Neither Approve Nor Disapprove 1414
(Missing) 2126
```

- Years: All of 2006-2018
- Limitations: See approval_pres
- To see who the Governor refers to for a particular respondent, see gov_inc (incumbent identifier in gov_fec, if applicable).

Presidential Vote

A note on intent and voted

In this dataset we make the distinction between "intent" / "preference" vs. "voted" / "vote choice". "Intent" (or "preference") refers to the response to the prospective question of the sort "who would you vote for?" in the *pre-election* wave. "Vote choice" refers to the response to the retrospective question of the sort "in the election this November, who did you vote for?" Response to the vote choice questions coalesces both *post-election* wave responses (the bulk of the responses) and pre-election respondents who reported having already voted early.

intent_pres_08: 2008 President preference (before voting)

"For which candidate for President of the United States would you vote?"

```
intent_pres_08
                  John McCain 13322
                 Barack Obama 12897
                     Ron Paul
                                 535
                  Ralph Nader
                                 209
                     Bob Barr
                                 258

Metadata and Identifiers

Identifiers

The case identifier case_id is unique within the year and is identical to the case identifiers in the individual year's CCES. It should be used in conjunction with year for a unique identifier for the whole dataset. Some individuals across years may be the same YouGov panel respondent with different identifiers; for example the 2007 CCES draws from the 2006 CCES respondents.

```
Observations: 452,755
Variables: 2
$ year <int> 2006, 2006, 2006, 2006, 2006, 2006, 2006, 2006, 2006, ...
$ case_id <int> 439219, 439224, 439228, 439237, 439238, 439242, 439251...
```

Current Representatives

Name and Party

The four names in the three offices are representatives of the respondent at the time of the survey. Names are printed as shown, and similarly parties are shown if the particular year's CCES did not show party. For example, Senator Shelby is presented as Richard Craig Shelby, Richard C. Shelby (R), Richard Shelby (R), Richard C. Shelby (R), depending on the year. Party names are abbreviated down to initials (D for Democrat, R for Republican, I for Independent) in this dataset.

```
Observations: 452,755
Variables: 4
$ rep_current <chr> "Patrick T. McHenry (R)", "Michael R. Turner (R)"...
$ sen1_current <chr> "Elizabeth Dole (R)", "Mike DeWine (R)", "Robert ...
$ sen2_current <chr> "Richard Burr (R)", "George V. Voinovich (R)", "F...
$ gov_current <chr> "Michael Easley (D)", "Bob Taft (R)", "Jon Corzin...
```

Incumbent Identifiers

Unique identifiers (ICPSR / Nominate for Congress, FEC for Governor) for the current representatives. Identifiers are not part of the individual year's CCES. Instead, I attempt to merge in these identifiers through a series of name and district merges.

The matching of identifiers to respondent occurs through matching by district, by district and last name, or both:

- For House representatives, we join on cong, st, and dist to a NOMINATE database that only consists of unique observations according to the key. For duplicates with regards to these three variables (e.g. in the rare case where a new representative comes into office mid-session), we match on cong, st, dist and last name.
- For Senators, we join entirely on cong, st, and last name
- For Governors, we join only on st and last name. In this period, there are no two governors in the same state that share the same last name.

- Years: All of 2006-2018
- Limitations: Please note there may be some incorrect merges, especially for nontraditional names and representatives who were elected in special elections and may not be in some datasets.

The unique identifiers can be used to join with other databases to append additional information such as committee membership and ideology scores, such as

Lewis, Jeffrey B., Keith Poole, Howard Rosenthal, Adam Boche, Aaron Rudkin, and Luke Sonnet (2017). Voteview: Congressional Roll-Call Votes Database. https://voteview.com/

Candidates

The text responses that the respondent chose in each of the intent_ / voted_ questions, if the respondent was a candidate. For example, respondent with case_id = 163051575 in the 2012 CCES chose the first option in the House representative preference question. intent_rep_chosen shows that for this particular respondent, the first option was Maxine Waters (Democrat) who has a FEC Identifier of H4CA23011.

The name and party are those as provided in the CCES datasets (e.g. in the form HouseCand1Name). The FEC ID is not part of the CCES but joined in this dataset.

For all three offices, the matching generally occurs by year, st, dist_up (not dist, because dist_up, refers to the district of the upcoming session) and party. party is the party affiliation as indicated in the CCES. For years 2008 and 2010, the first option is automatically labelled as a Democrat and the second option as a Republican, although these may be inaccurate at times.

The FEC database runs up until 2014 (thus more recent candidates do *not* get a FEC ID) originates from

Bonica, Adam, 2015, "Database on Ideology, Money in Politics, and Elections (DIME)", doi:10.7910/DVN/05PX0B, Harvard Dataverse, V2

which helpfully includes candidates office sought, district (for House members), party affiliation, and cycle in which the candidate filed. The variable cycle in Bonica's data is used to join on the CCES dataset's year variable.

Only candidates who are unique within the district and party are considered for the first join. However, many candidates are not unique within the district-party, as many co-partisans may file in the same district. The second matching process thus considers the full name of the candidate listed in the CCES and the candidates in the FEC database. *Within* the subset of year, district, and party, a Jaro-Winker string distance (that ranges from 0 to 1) is computed for both last name and the first name - middle name. If the sum of the two string distances are more than 0.2 for all possible combinations, no match is returned. If there is a unique combination that achieves a unique minimum that is below 0.2, that combination is declared a match. If there are multiple matches with the same minimum string distance, one is randomly chosen.

Chosen

```
Observations: 452,755
Variables: 6
$ intent_rep_chosen <chr> "Richard C. Carsner (D)", "Stephanie Studeba...
$ intent_sen_chosen <chr> NA, "Sherrod C. Brown (D)", "Robert Menendez...
$ intent_gov_chosen <chr> NA, "Ted Strickland (D)", NA, "Rod Blagojevi...
$ voted_rep_chosen <chr> "Richard C. Carsner (D)", "Stephanie Studeba...
$ voted_sen_chosen <chr> NA, "Sherrod C. Brown (D)", "Robert Menendez...
$ voted_gov_chosen <chr> NA, "Ted Strickland (D)", NA, "Rod Blagojevi...
```

- Years: 2006, 2008, 2010, 2012, 2014, 2016, 2018
- Early years may mislabel the candidate's party, especially when the two candidates are of the same party (as in top-two primary states)

Candidate Identifiers

```
Observations: 452,755
Variables: 6
$ intent_rep_fec <chr> "H6NC10141", "H60H03142", "H0NJ01066", "H8IL090...

```

- Years: 2006, 2008, 2010, 2012, 2014, 2016
- Limitations: Matching may be inaccurate (see previous section on matching methodology). In particular, a lack of a FEC ID may either indicate a failure of the matching procedure, or that the candidate in question did not file under the FEC. The match rate in the current procedure is upwards of 80 percent in the current procedure.
